

Environment & Sustainability

Strategy 2042

Welcome

"All Australians rely on the environment. Healthy ecosystems and biodiversity are vital for human survival, quality of life and economic prosperity." - The State of Australia's Environment 2021.

The Environment and Sustainability Strategy 2042 sets the direction for healthy environments and sustainable lifestyles over the next 20 years. The Strategy will guide the actions of Council and our partners to achieve our long-term vision and strategic directions identified in our Corporate Plan 2022-2027.

It is one of six Council strategies that will play a central role in delivering transformational change as our region grows and evolves. Together they enable an integrated and balanced approach to planning, ensuring our natural environments are protected and our communities have the services and infrastructure they need.

A healthy environment allows for a healthy, vibrant community which in turn supports a healthy, prosperous economy. That means we need to look after the natural resources or 'natural capital' (like native vegetation, soil, wetlands, rivers, biodiversity and clean air) that we depend on for our food, clean water and air, livelihoods and lifestyles.

The 2021 Australian State of the Environment Report outlined that the state and trend of the environment of Australia is poor and deteriorating because of increasing pressures from unsustainable land use, climate change, habitat loss, invasive species and resource extraction.

The Strategy responds to the pressures facing our region and key international, national, state and local considerations. It supports achievement of the Our Healthy Environments goal in Council's Corporate Plan 2022-2027:

By 2033, our Moreton Bay will be renowned for its healthy natural and built environments that enhance our identity, support biodiversity and our sustainable lifestyles.

This strategy addresses the six outcomes that drive the Our Healthy Environments goal. It sets strategic priorities, policy directions, measures, and actions to drive long-term transformational change, with a particular focus on the next 5-10 years.

As we face the key challenges of responding to climate change, intensifying natural hazards and reversing the impacts of habitat and biodiversity loss we will need to take an integrated and collaborative approach recognising the roles of Council, other levels of government, Traditional Custodians, tertiary/research institutions, industry/business, landowners and the wider community to contribute to meaningful change.

Corporate Plan 2022-2027

Our Vision

Our Moreton Bay. Amazing places. Natural spaces.

Our purpose

Our communities are central to what we do. Working together, we aim to make our Moreton Bay a great place now and for future generations.

Our Strategic Pillars

OUR VIBRANT COMMUNITIES

Our Goal:

Our Moreton Bay will have vibrant communities that proudly come together to participate in and celebrate different cultures and life experiences, with access to the services and facilities they need.

Community Wellbeing Strategy

OUR WELL-PLANNED PLACES

Our Goal:

Our Moreton Bay will be a network of well-planned and connected places and spaces, enhancing lifestyle, accessibility and employment choices.

Integrated Transport Strategy
Growth Management Strategy

OUR PROGRESSIVE ECONOMY

Our Goal:

Our Moreton Bay will have a progressive and robust economy that capitalises on its unique competitive advantages, partnerships and technology.

Economic Development Strategy

OUR ENGAGED COUNCIL

Our Goal:

Our Moreton Bay Regional Council will be an accountable, transparent, engaged and responsive organisation committed to great customer experiences and continuous innovation in service delivery.

Organisational Excellence Strategy

OUR HEALTHY ENVIRONMENTS

Our Goal:

Our Moreton Bay will be renowned for its healthy natural and built environments that enhance our identity, support biodiversity and our sustainable lifestyles.

Environment and Sustainability Strategy

Our Values

Service, Teamwork, Integrity, Respect, Sustainability

Acknowledgement

We acknowledge the Jinibara, Kabi Kabi, and Turrbal Peoples as the Traditional Custodians of the lands and waterways of the Moreton Bay Region and beyond, and pay our respects to their Elders, past, present and emerging.

We recognise that the Moreton Bay Region has always been a place of cultural, spiritual, social and economic significance to Aboriginal and Torres Strait Islander peoples.

We are committed to working in partnership with Traditional Custodians and other Aboriginal and Torres Strait Islander communities to shape a shared future that celebrates Aboriginal and Torres Strait Islander histories, cultures and contributions as an irreplaceable foundation of our region's collective identity.

Innovate Reconciliation Action Plan

Council is developing its first Innovate Reconciliation Action Plan (Innovate RAP), informed by Aboriginal and Torres Strait Islander voices.

It aims to improve Council's capacity to deliver positive outcomes for Aboriginal and Torres Strait Islander communities by acting as a foundation for respectful relationships, stronger partnerships and meaningful opportunities.

The RAP recognises the important role and deep traditional knowledge of Traditional Custodians and Aboriginal and Torres Strait Islander communities in looking after our environment and caring for our beautiful region.

A key action will be for Council to take meaningful steps to integrate and embed reconciliation principles and actions across all our strategic planning documents, including this strategy.

This draft Strategy was adopted on 15 February 2023 for community consultation purposes.

Disclaimer

Moreton Bay Regional Council and its officers accept no liability for decisions made based on information, expressed or implied, provided in this document.

Message from the Mayor

We believe that Moreton Bay should go green as it grows.

Our communities cherish the amazing places and natural spaces that make up Moreton Bay. This includes our beaches, wetlands, waterways, rainforests, bushland, coastal and marine environments, and the wildlife these habitats support. Approximately 42 percent of our land is covered in native vegetation, and we have committed to maintaining that. You have resoundingly told us that you want Council to do much, much more. Especially as we know our environment is likely to drastically change over the next 20 years.

So it's time for Moreton Bay to become a future focused Council.

An overwhelming 73 percent of our communities told us that reducing Council's own carbon footprint is a good use of public money. We have listened and set a corporate, science-based, greenhouse gas reduction target of net zero emissions for council operations by 2039.

This ambitious target sets the tone for our new Environment and Sustainability Strategy and steps up to the challenge of meeting community expectations and aspirations with actions over the next 20 years.

We want this Council to be a leader in sustainability through impactful initiatives, even if they are complex and expensive. For example, right now over half of our emissions come from waste, so introducing our own Food Organics and Green Organics system (FOGO) will go a long way to addressing the issue. I also want to divert 85 percent of waste from landfills and increase our recycling rate to 70 percent by 2040.

This is what we mean by 'Going Green As We Grow'. Unlike other councils and organisations, I don't want to purchase carbon credits. I want us to do the hard work in order to make a real difference to our environment.

I hope you share my excitement for safeguarding our region of amazing places and natural spaces.

Peter Flannery
Mayor Moreton Bay Regional Council

Our Moreton Bay

Our Region Today

Our Moreton Bay region is an amazing place located in the heart of South East Queensland.

It has been home to the Jinibara, Kabi, and Turrbal peoples for thousands of years. Today it is home to many communities from a wide range of cultural backgrounds and welcomes visitors from all parts of Australia and around the world.

Our region is recognised for its natural beauty with access to the iconic waters of Moreton Bay and the D'Aguilar mountain range. We have extensive waterways, wetlands and bushland corridors with an abundance of wildlife, much of which has national and international significance.

Our region is growing with around 10,000 new residents each year and a population nearing 700,000 by 2042. We have a diverse set of urban, seaside, semi-rural and hinterland communities linked by multiple urban centres including Caboolture, Morayfield, North Lakes, Redcliffe, Strathpine, and several smaller townships.

Our region's economy has evolved as the engine room of the South East Queensland economy. We are a flourishing base for a range of sectors including advanced manufacturing, food and agribusiness, tourism and knowledge-based industries. Our proximity to key transport and logistics infrastructure provides direct access to domestic and global markets, supporting our ability to attract investment, tourism and other economic opportunities.

Our environments today

The Moreton Bay Region is more than 2,045 square kilometres and encompasses a vast range of natural environments from coastline in the east through to the hinterland ranges in the west. Our region of natural beauty includes the iconic Moreton Bay and the D'Aguilar mountain range, with extensive waterways, wetlands and bushland corridors. Forty-two (42) percent of the region is covered in native vegetation (see map on Page 11) and there is over 14,000 hectares of Council reserves and parks. With an abundance of wildlife, much of which is of national and international significance, these environments support over 2,419 plant and 805 animal species¹.

Our green spaces form part of the character and amenity of our communities. Mapping of native and exotic tree cover (defined as any tree exceeding 2 metres in height) in suburbs across much of the region reveals increases in cover between 2021 and 2022. Many rural areas such as Moorina, Welsby and Kurwongbah recorded significant increases (8.7%, 8.0% and 7.6%) in addition to more developed areas including Narangba, Griffin and Mango Hill (4.2%, 3.1% and 2.6% respectively)^{2, 3}.

The Moreton Bay Region experiences hot, humid summers and mild winters with our inland areas encountering more extreme weather conditions than their coastal counterparts. Bureau of Meteorology statistics drawn from our Redcliffe weather station showed an average daytime high of 28-30°C and a minimum of 18-19°C between January and March 2022. The mean annual rainfall for our region is 1147mm and we experience an average of 1.6 days of extreme heat over 35°C per year⁴.

Our region is exposed to a variety of natural hazards including heatwaves, earthquakes, bushfires, severe thunderstorms, east coast lows and cyclones. In the last twenty years 127 severe storms have been recorded in the Moreton Bay region and 2 tropical cyclones (Marcia and Debbie) have passed within 200km. Flood watch events for the upper Brisbane River, and Pine and Caboolture Rivers affecting our region were issued on 9 and 8 separate occasions respectively between June 2021 and May 2022. This is an increase on the annualised average of 2 events per annum in the preceding 5 years.

Although some areas experience bushfires throughout the year, the greatest risk of fire danger is in spring and early summer when the vegetation is at its driest. Fire incidents across the region have been lower in the last 2 years due to the wetter conditions resulting from the La Nina phenomenon.

Our drivers of change

Council's Corporate Plan has identified six overarching drivers of change that will continue to influence our work over the next 10-20 years: sustainability, planning for growth, community identity, digital transformation, community trust and adaptive workplaces.

Acknowledging these drivers of change there are some key issues and opportunities that are particularly important to consider if we are to create the healthy environments and lifestyles we seek in future. These issues and opportunities underpin this strategy's priorities, policy directions and actions.

Key issues and opportunities

According to the 2021 State of the Environment Report, Australia's environment is poor and deteriorating because of increasing pressures from climate change, unsustainable development, habitat loss, invasive species, pollution and resource extraction⁵.

There are opportunities to improve the health and condition of our natural environment and ensure long-term sustainable outcomes through combined efforts of all stakeholders.

⁵ <https://soe.dcceew.gov.au/overview/key-findings> retrieved on 28/07/2022

Key Issue 1: Growth and associated development pressures

Moreton Bay is one of Australia's fastest growing regions. It is anticipated that by 2031, the Moreton Bay Region will have a larger population than Tasmania. Over the next 20 years, an additional 200,000 people will move to the region, resulting in approximately 700,000 people calling Moreton Bay home.

Accommodating anticipated population growth is a matter that Council has legislative obligations to plan for and this is set out in ShapingSEQ, the State Government's South East Queensland Regional Plan. ShapingSEQ identifies an 'urban footprint' to accommodate urban development requirements to 2041 and includes established urban areas and land for potential urban development.

ShapingSEQ requires Council to plan for a minimum of 88,300 new dwellings to be built in the region between 2016 and 2041⁶. However more recent projections suggest that around 90,000 new dwellings will need to be accommodated by 2041. This equates to around 4,500 dwellings per year. Equally important from a sustainability point of view are the employment land and social infrastructure (eg schools, community centres, libraries etc) needs and the economic growth required to support a growing population.

The construction of housing, businesses, industry and the social and other infrastructure requires land and resources. This will place pressure on our existing environment. However, it also provides an opportunity to use existing urban land and resources most efficiently and plan and construct our communities in new ways to be more sustainable, supporting our healthy environments and lifestyles and responding to climate change and addressing natural hazard risks.

Council's Growth Management Strategy will set out how Council will manage urban growth in the region including how key growth challenges will be addressed over time. This strategy provides strategic and policy guidance on aspects of the built environment, responding to climate change and addressing natural hazards and as well as fundamental principles on conservation of the natural environment and ecosystem services on which we all rely.

⁶ [shapingseq.pdf \(windows.net\)](#). Accessed 4 August 2022.

Key Issue 2: Climate change

The impacts of climate change are serious and widespread. While Queensland has long experienced extreme weather, climate change is influencing the frequency and severity of these events across the globe⁷. This increased frequency of extreme weather and natural disasters impacts our communities' ability to recover due to less time between events.

Every increment of average global warming causes wide ranging changes to temperatures, precipitation and soil moisture that vary across different regions⁸. Regional projections indicate that South East Queensland will experience increasing temperatures, more frequent hot days, harsher fire weather, and increasing rainfall variability⁹. Under a high emissions scenario Brisbane's climate in 2030 would be more like the current climate of Bundaberg¹⁰.

The International Panel on Climate Change 2022 Sixth Assessment Report confirms the increasing impacts on natural and human environments, and alteration of our climate, environment and living conditions.

Global surface temperature will continue increasing until at least 2050 despite steps taken now

Immediate deep cuts in greenhouse gas emissions could hold global warming below 2°C

Warming would reach about 2.4°C by 2050, rising to about 4.4°C by 2100¹¹ (under unabated business as usual greenhouse gas emission rates)

Another important consequence of the changing climate in our region is rising sea-levels, which will expand areas affected by tidal inundation and increase coastal erosion. Global sea levels respond slowly to greenhouse gases, and despite potential cessation of emissions, there will be a continuing sea level rise over the centuries and millennia.

What happens beyond 2050, however, depends on the success of global emissions reduction action. Projected sea level rises in 2100 range up to approximately 0.77m for a business-as-usual emissions reduction pathway. Global warming between 1.5°C and 2°C, consistent with the Paris Agreement, would most likely limit sea level rise to approximately 0.38m by 2100^{12, 13}.

Key Issue 3: Biodiversity and habitat loss

The variety of habitat in our region can be found in coastal areas, wetlands, rainforests and mountainous areas and are home to diverse array of plant and animal species. The different combinations of landforms and soils support vegetation communities like eucalypt forests and woodlands, melaleuca (paperbark) woodlands, coastal saltmarshes and mangroves, and rainforests and vine thickets. These communities cover 42% of the region (see map on page 11) and are found within National and Conservation Parks, State Forests and Council's reserve network as well as on private land¹⁴. These diverse natural areas are the foundation of the rich biodiversity in our region, highly valued by the community and part of our identity.

Land clearing over time has removed and isolated habitats, amplifying the threatening processes and impacts of urban and rural development and a changing climate on plants and animals. At present 33 native plants and 51 native animals in the region are listed as threatened under national and state legislation¹⁵.

It has been estimated that native vegetation clearing has occurred at a rate of 0.45% per annum resulting in more than 20,000 hectares of native vegetation being cleared since 2000. Eucalypt forests and woodlands located on floodplains have experienced the most decline across the region with 17.6% (3,135 hectares) remaining. This has implications for the survival of species like the iconic Koala, which has experienced a 62% loss of habitat in the region since European colonisation¹⁶.

The resilience of some species will be threatened by the impacts of climate change, including increasingly severe bushfires, particularly if their ability to migrate or adapt is limited by environmental conditions such as poor habitat connectivity or the availability of other suitable habitats. Another consequence of climate change is sea level rise which has implications for the extent of important mangrove habitats.

Another consideration for biodiversity conservation is the management of pest animals and plants. The impacts of pest animal and plant species will vary and often treatment responses and approaches may have to be tailored based on an assessment of risks and circumstances. For example, Fire ants are an introduced pest from South America. They cause significant social and economic impacts from their aggressive behaviour and painful sting, as well as environmental impacts by feeding on ground-dwelling or nesting fauna, eating, and damaging seeds and displacing some native species¹⁷. Fire ants were detected in the region in 2022 as part of the national eradication program¹⁸.

Council undertakes pest management activities and is working with stakeholders to continue to address current and emerging threats, which will be important to biodiversity conservation, particularly with the increasing influence of climate change.

Opportunity 1: The economy, innovation and technology

Our Moreton Bay economy is evolving. By the year 2041 it is expected to more than double compared to 2020, reaching \$40 billion and creating an additional 100,000 new jobs and 16,000 new businesses¹⁹. This new growth will bring both sustainability challenges and opportunities for the future of our region.

The CSIRO's Our Future World²⁰ report identifies seven global megatrends that will impact how we live over the coming decades. Three megatrends that are relevant include:

- The rapidly growing digital and data economy.
- The rise of artificial intelligence and advanced autonomous systems to enhance productivity and outputs across all systems.
- An increased focus on potential solutions to our resource constraints through synthetic biology, alternative proteins, advanced recycling and the net-zero energy transition.²¹

Council's Regional Economic Development Strategy identifies knowledge, innovation and entrepreneurship as a priority high value-adding industry that will support the future economy of the region.

Proactively responding to the opportunities provided by these megatrends coupled with a strategic vision for a sustainable and economically competitive region, will foster a diversity of industries, sectors and businesses that embrace innovation, technology, sustainability and a circular economy.

Opportunity 2: Resilience

Our environmental, social, cultural and economic assets will be under increasing pressure as our region is exposed to the adverse effects of climate change. Extreme weather events such as bushfires, floods, storms and heatwaves are occurring more frequently and intensely and this is expected to continue.

Average and extreme temperatures will increase. The combination of sea level rise and storm tide inundation will threaten coastal areas. Wind hazard events will also become increasingly frequent and severe. These hazards have potentially significant implications for our safety, health and way of life.

Adapting to these challenges presents an opportunity to re-think how we live, design our buildings and infrastructure, manage our natural areas and disaster events, and protect our most vulnerable. We can transition from reacting to and recovering from these changes, to being proactive by addressing risks and planning for resilience to enable our communities to thrive in the future.

²⁰ www.csiro.au/en/research/technology-space/data/Our-Future-World

²¹ www.csiro.au/en/news/News-releases/2022/Seven-megatrends-that-will-shape-the-next-20-years

Opportunity 3: Brisbane 2032 Climate Positive Games

The Brisbane 2032 Olympic and Paralympic Games will provide the region with a number of opportunities from increased international tourism, trade and business investment to social benefits around community pride and enhanced partnerships between the different levels of government. Importantly, the requirement to deliver a climate positive Games will foster innovation and behavioural change through efforts to minimise the impact of the Games on the natural environment and ensure an enduring legacy. This could include greater consideration of the environmental performance of infrastructure, using nature-based solutions to engineering problems, implementing circular economy practices, reducing greenhouse gas emissions and promoting and using more sustainable forms of transport.

Our strategic framework

Our planning approach

Our approach to strategic planning is based on the integration of our vision and Corporate Plan, financial and asset management plans, Planning Scheme and other planning instruments, long-term strategies and supporting plans.

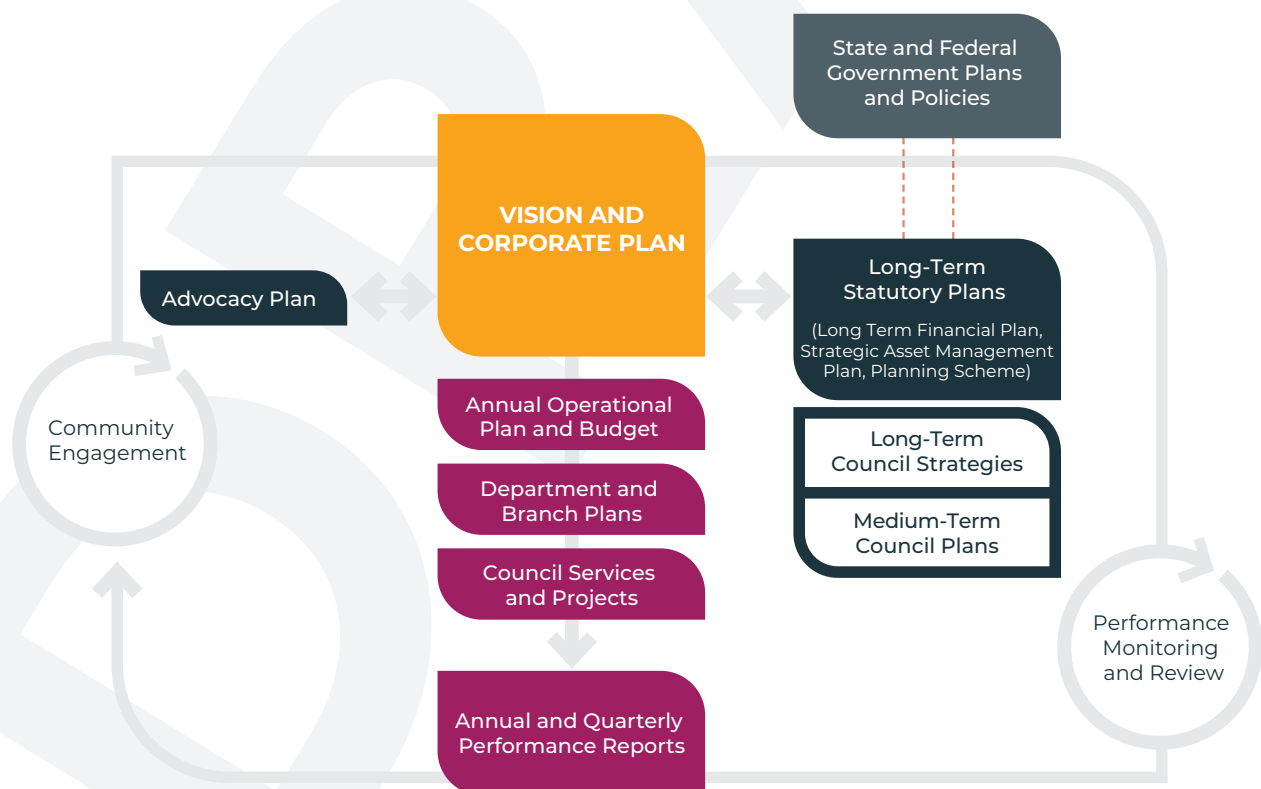

At the centre of the integrated planning and performance framework (refer below) is the Corporate Plan and vision (*Our Moreton Bay. Amazing Places. Natural Spaces*). The Corporate Plan is structured around five strategic pillars consistent with Council's commitment to creating a sustainable future.

This Strategy sits under the 'Our Healthy Environments' pillar and the outcomes from the Corporate Plan form its basis.

Our strategies are fundamental to delivering transformational change, and respond to current and emerging issues, trends, challenges and opportunities.

This strategy complements Council's other five strategies and its implementation will contribute to a broader program of collective planning, decision making and performance measurement. Some implementation activities will result in changes to operational plans and budgets and preparation of supporting medium term plans.

Moreton Bay Regional Council Integrated Planning and Performance Framework

Our strategy framework

This strategy provides a whole-of-council long-term framework that is intended to guide decision making, drive implementation and prioritise action and investment. To do this, supporting plans will have a key role in strategy delivery. These are outlined below.

**asterisk indicates a proposed future plan*

Some of these plans are already in existence or in preparation and others will be developed in the coming years (refer to Action Plan) to address identified gaps, enhance integration and alignment with the directions in this Strategy. Importantly not every plan that will implement the outcomes of this strategy is included in the diagram above.

Our policy influences

This strategy has been informed and guided by applicable international, federal, state and regional frameworks, legislation, strategies and plans.

Federal and State legislation

It is estimated in excess of 100 pieces of legislation and practice standards govern and are incorporated into Council's operations to ensure the environmental health and sustainability of our region. The snapshot below gives an indication of the depth and complexity of this regulatory environment:

- 20+ Federal legislation/regulations
- 60+ State legislation/regulations
- 30+ address biodiversity and/or biosecurity
- 10+ address waste management
- 10+ address climate resilience, emissions mitigation and/or disaster planning.

The legislation above addresses concerns as diverse as the management of natural resources, heritage and identity, economic development, resource efficiency, urban growth, transport, emissions mitigation, hazardous materials and chemicals, climate resilience, disaster management planning and the provision of local infrastructure.

The development of the ESS has been influenced by the complex regulatory environment in which Council operates. *The Local Government Act 2009* and *Local Government Regulation 2012* is the principal legislation governing Council's establishment, constitution and operation.

Key legislation

Planning Act 2016 outlines an efficient, effective, transparent, integrated, coordinated, and accountable system of land use planning, development assessment and related matters for ecological sustainability.

Environment Protection and Biodiversity Conservation Act 1999 (Commonwealth) protects and manages flora, fauna, ecological communities and heritage places.

Environmental Protection Act 1994 protects Queensland's environment while allowing for development that improves the total quality of life, both now and in the future, while maintaining ecological processes.

Vegetation Management Act 1999 regulates the clearing of vegetation in Queensland.

Waste Reduction and Recycling Act 2011 contains a suite of measures to reduce waste generation and landfill disposal and encourage recycling.

State plans and strategies

This strategy has been informed by the relevant regional and State policies and strategies, in particular:

South East Queensland Regional Plan (ShapingSEQ) - guides regional growth and development within South East Queensland.

Queensland Climate Adaptation Strategy 2017-2030 - focuses on understanding climate risk, access to the best risk-analysis tools to support adaptation, integration of climate adaptation into policies, and collaborative implementation.

Queensland's Zero Emission Vehicle Strategy 2022-2032 - focuses on accelerating Queensland toward a cleaner, greener transport future while ensuring the energy network supports the transition to zero emission vehicles.

South East Queensland Koala Conservation Strategy 2020 - 2025 - sets out Queensland Government's collaborative approach to halting the decline of koala populations. Focusing on habitat protection, restoration and threat mitigation, its actions respond to the key recommendations and objectives provided by the Queensland Koala Expert Panel.

South East Queensland Natural Resource Management Plan (2009-2031) - 2021 Update - sets region-wide targets to preserve the health of our natural assets. The most recent 5-yearly update, in 2021, found progress towards region-wide targets has been variable. The plan's responses were reviewed across each target area to account for this most recent information.

South East Queensland Waste Management Plan - is a collaborative response from South East Queensland councils to the challenge of waste management under conditions of continuing population growth. Canvassing both behavioral change campaigns and infrastructure options, it sets direction to develop the region's capacities in resource recovery and value maximization.

Global frameworks

Intergovernmental Panel on Climate Change (IPCC) has identified a number of climate change risks and impacts for the Australasian region, which are particularly relevant for South East Queensland and the Moreton Bay region. Adverse impacts on ecosystems and human systems resulting from extreme weather events and climate impacts including heatwaves, floods, droughts, storm and fires are expected to increase which will exacerbate underlying existing vulnerabilities. This highlights the importance of taking immediate action to mitigate and adapt to the risks and impacts of a changing climate.

The IPCC's Sixth Assessment Report recommends immediate action on climate change in order to keep global warming below a 2-degree Celsius increase, in accordance with the Paris Agreement (a legally binding international treaty on climate change which was adopted by 196 Parties at Conference of Parties 21 in Paris, on 12 December 2015). These global issues with local impacts have been taken into consideration in the development of policy directions and targets in this strategy, to address climate change and natural hazard risks and as part of being a more sustainable and resilient region.

Sustainable Development Goals

Council's vision for the future of the region reflects the United Nations Sustainable Development Goals (SDGs) which provide a shared blueprint to address common social, economic and environmental issues that impact all communities on a global and local level.

The 2030 Agenda for Sustainable Development was adopted by all United Nations Member States, to guide global sustainable development to 2030 and is comprised of seventeen (17) SDGs. The SDGs aim to ensure a holistic approach to sustainable development by aligning strategies that improve health and education, reduce inequality, and spur economic growth, while tackling climate change and working to preserve our natural environments.

The SDGs have been committed to by the Australian Government, providing direction to all levels of government and a shared responsibility in working towards the goals. All SDGs compliment and reinforce each other to support the overarching objective of global sustainability. Many, or even all, goals are potentially relevant to some degree, but this strategy highlights the most direct links and aligns with the following SDGs.

As our region will also help host the Brisbane 2032 Olympic and Paralympic Games, achievement of relevant SDGs are a key focus of sustainability initiatives for the Games and an ongoing opportunity for South East Queensland.

Council's role

Local government is commonly recognised as a service provider, regulator, advocate and facilitator for its communities. These roles all play a part in protecting the environment and promoting sustainability. Council will undertake each of these roles, to varying degrees, as part of its ongoing journey to creating and maintaining healthy natural and built environments.

Our community places high value on the diverse habitats and natural beauty of our region as well as its unique lifestyle. Council has an important role as a steward of our region's natural environment, and a leader in planning for its future growth. Successfully maintaining and improving healthy natural and built environments that support biodiversity and our sustainable lifestyles is something we have to do together - Council, other levels of government, tertiary/ research sector, industry sectors, Traditional Custodians, landowners and the wider community. Council recognises its role as a leader and facilitator but also as an advocate and partner channeling communication and ideas. Council recognises that there are efficiencies to be achieved and knowledge to be gained by working together.

It is important to recognise that Council is not solely responsible for funding, achieving outcomes or policy change for many matters, with some issues (eg such as statutory koala protections) the responsibility of the State and Federal governments. In these situations, however, Council's role involves partnering with stakeholders like the State and Federal Government or private sector, to deliver outcomes. Where Council does not have a direct role, it can advocate to other levels of government for improved outcomes.

The various roles of Council in protecting the environment and promoting sustainability

Council adopts several roles to achieve this strategy's outcomes and priorities (refer to the Action Plan). At different times Council will provide leadership to deliver services and programs, advocate, educate or partner with our communities and other stakeholders.

Our services

Our services that support this strategy's delivery include:

- Environmental Services
- Conservation Management
- Green Infrastructure Planning
- Fire Management
- Pest Management
- Environmental Centres
- Environmental Education and Information
- Waste and Recycling Services
- Sustainability Planning
- Biodiversity Planning
- Natural Hazards Planning
- Cultural Heritage Planning
- Coastal and Waterways Management
- Waterbody Maintenance
- Urban Design and Place Making
- Land Use and Infrastructure Planning
- Development Assessment and Compliance
- Active Transport Planning
- Community Grants and Partnerships
- Disaster Management
- Fleet Management
- Asset Management and Maintenance
- Digital Innovation
- Procurement
- Project Management
- Advocacy
- Investment Attraction
- Strategic Industry Partnerships.

Collaboration and partnerships

Collaboration is at the core of this strategy. Our communities and other stakeholders such as Traditional Custodians, government agencies, industry sectors, and landholders play an important supporting role in the delivery of this strategy.

Council must also advocate and partner with others to achieve our organisational priorities in areas we do not directly control, where we seek to influence change, or require additional resources.

Our engagement and research

How we developed this strategy:

Existing and past Council projects	Current trends and opportunities	Internal consultation	Community engagement	Technical expertise
Council has policies and projects which have helped identify efforts and success to inform future planning.	Learning from others and understanding best practice has been important to understand our pathways.	Collaborating across Council departments helped create a strategy that is relevant to all our teams and works together with our other strategies to deliver our vision.	Our communities have provided great insights into the most pressing issues and outcomes our strategies should address.	Seeking external subject matter experts and undertaking extensive research helped outline ambitious and achievable pathways.

Working with our communities

This strategy has been informed by extensive community engagement around Council's Our Moreton program, as well as data from our Moreton Says surveys.

This comprehensive engagement exceeded previous community engagement programs. It provided several opportunities for Council's strategy teams to meet with our communities. We listened to residents and visitors across the region to ensure our long-term planning reflects their aspirations and priorities.

These engagement activities enabled us to create a strategy that reflects the priorities and aspirations of our communities and stakeholders. Our communities' views demonstrated a strong value on the importance of the natural environment and support for ensuring priority actions are undertaken including related to climate change.

Council has released several consultation reports that summarise community feedback received during each consultation project. These are available on Council's Your Say website yoursay.moretonbay.qld.gov.au/moreton-says.

80 community members attended a Summit which included consultation for this strategy

4000+ people responded to the Moreton Says survey which rated the environment as the region's top value

What we heard from our communities

Our communities contributed to this strategy through a summit, forums, surveys, youth program, and engagement events. The following themes emerged through this consultation:

1. Natural areas and wildlife habitats	<ul style="list-style-type: none">• Our flora and fauna are a unique part of the region's identity. Our communities want Council to prioritise their preservation, protection and restoration.• Habitat restoration and wildlife corridors are also important to our communities. Residents made suggestions about environmental protection, and increasing natural areas managed for environmental purposes.• Our communities want Council to set high standards of environmental performance for development. Residents identified finding a balance with growth as a key issue. They did not want growth to come at the cost of the natural environment.
2. Coasts and waterways	<ul style="list-style-type: none">• The preservation of the region's natural environment is a high priority for our communities.• The community wants Council to ensure effective management of waterways and coastal health.
3. Sustainable living - buildings, neighbourhoods & infrastructure	<ul style="list-style-type: none">• Our communities want us to improve our region's sustainability through better infrastructure building practice, limits on urban sprawl and better designed neighbourhoods and buildings.• When asked about new developments 6 in 10 survey respondents said they want buildings that are suitable for the climate and incorporate greenery.• 2 in 5 people prioritised the use of environmentally responsible construction materials and practices.
4. Climate change and natural hazards	<ul style="list-style-type: none">• Climate change is a major concern for our communities. Engagement discussions focused on mitigation, education and resilience.• Surveys demonstrated 73% of respondents agreed or strongly agreed that reducing Council's carbon footprint is good use of public money.• Similarly, 76% agreed or strongly agreed that helping community members reduce their carbon footprint was a good use of public money.
5. Waste and recycling	<ul style="list-style-type: none">• Our communities said they are motivated to reduce waste, recycle and reuse items such as building materials and generally consume less.• They were concerned about how waste will be managed as the region's population grows.• Residents consistently identified improvements in recycling and waste collection as factors that would support sustainable waste management behaviours.

6. Sustainability in our communities

- Our communities told us they want higher Council standards and service performance to achieve improved environment and sustainability outcomes.
- Residents are interested in reducing water use, energy saving technology, more solar electricity, growing food locally and electric vehicles.
- They support climate change education and resilience building.
- Residents identified factors such as cost as a barrier to more sustainable lifestyles. There are also barriers such as the need for more effective public transport and active transport infrastructure.

Residents' priorities aligned with the Community Wellbeing, Growth Management, Integrated Transport and the Regional Economic Development strategies. They focused on achieving more sustainable growth, sustainable development outcomes and protecting the natural environment.

What our research told us

We used the following research to inform this strategy:

- Benchmarking against other councils and scanning relevant sectors for good practice
- Review of relevant national and global trends
- Review of key state and federal policy settings
- Internal consultation across council departments.

This research included an inventory of greenhouse gas emissions and expert advice which helped inform our selection of the net zero emissions reduction target for Council operations by 2039 (addressed in Outcome 4).

In addition to undertaking engagement with our community, an internal engagement process was also undertaken to gather data and ideas and support preparation of this strategy and implementation of its actions. A stocktake of our environmental and sustainability activities confirmed Council has business as usual activities across conservation, fauna (including key species) management, water quality, catchment management, waste management and recovery, active transport, sustainable living, climate change mitigation and natural hazard management.

This review also revealed opportunities for better alignment and coordination of existing efforts, strategic priority setting and opportunities for more action in some key areas. This strategy will assist Council to address those opportunities and align its priorities and policies.

As staged implementation of this strategy occurs Council will continue to progress significant environment and sustainability initiatives in the region such as:

- Land Buyback for Environmental Purposes Program
- Voluntary Conservation Agreements
- Land for Wildlife
- Bushcare
- Tree planting program
- Green infrastructure (fauna movement infrastructure and signage) program
- Environmental Education Centres and engagement programs
- Landfill gas collection and conversion to energy at waste facilities
- ASPIRE circular economy marketplace platform
- Feasibility investigation for Council solar farm
- FOGO (food organics, garden organics) third bin collection service feasibility investigation and rollout
- Shoreline erosion management planning
- Preparation of the Coastal Hazard Adaptation Strategy
- Natural hazard (flood, bushfire, urban heat, landslide) investigations.

Our strategy roadmap

Our journey ahead

Achieving healthy and resilient natural and built environments that enhance our identity, support biodiversity and our sustainable lifestyles requires an integrated policy approach combined with ongoing action in collaboration and partnership with stakeholders and the community.

Our strategy roadmap is grounded in the identification of overarching guiding principles which inform the delivery and review of the Strategy. The key strategic priorities, targets, policy directions and measures of success are then outlined for each of the following six (6) outcome areas identified in Council's Corporate Plan 2022-2027 for the 'Our Healthy Environments' pillar.

Outcome 1: Biodiversity and habitats

Our special natural areas and wildlife habitats are connected, protected and enhanced.

Outcome 2: Coasts and waterways

Our coasts and waterway catchments are used sustainably, and environmental values are protected and enhanced.

Outcome 3: Sustainable living

Our neighbourhoods, buildings, and infrastructure support sustainable living.

Outcome 4: Climate action

We understand and proactively respond to climate change and natural hazard risks.

Outcome 5: Use of resources

We enable our materials and resources to be used cleverly and recycled to avoid waste and pollution.

Outcome 6: Sustainable choices

Our communities and businesses practice sustainability in the choices they make every day.

Each outcome includes strategic priorities and policy directions and some include targets where a specific and measurable target has been identified. Strategic priorities are longer-term and higher-level objectives that assist to break down the outcome into component parts. Policy Directions give more clarity around the mechanisms, key decisions and general actions/ directions that need to be taken to achieve the strategic priorities, targets (where relevant) and overall outcome.

The approach to monitoring and review and foundational actions for the first five years rounds out the roadmap approach and is included at the end of this strategy.

Our guiding principles

The following 5 fundamental guiding principles provide the overarching framework for how this strategy will be implemented and reviewed.

Demonstrating leadership

We will lead by example, inspire best practice from local industry and the community and empower our stakeholders to take action.

Collaborative and innovative

We always strive for the best outcome possible using innovation, collaboration and partnerships.

Adaptable and resilient

We are flexible and adaptable in our responses to rapid advances in technology, emerging data, changing circumstances, community views, new opportunities and emerging threats and trends to ensure resilient outcomes.

Best practice and contemporary information-led

We seek the best available information, practices, science and advice, and continually update our knowledge and skills.

Sustainable

We embrace and integrate the following principles of ecologically sustainable development²²:

- The precautionary principle: If there are threats of serious or irreversible environmental damage, lack of full scientific certainty should not be used as a reason for postponing measures to prevent environmental degradation.
- Inter-generational equity: The present generation should ensure the health, diversity and productivity of the environment are maintained or enhanced for the benefit of future generations.
- Conservation of biological diversity and ecological integrity: Conservation of the variety of life forms as the foundation for social and economic systems.
- Improved valuation, pricing and incentive mechanisms: Environmental factors and considerations (such as life cycle costs or polluter pays) should be included in the valuation of assets and service.

²² EPBC Act 1999, Section 3A, accessed at www.legislation.gov.au/Details/C2021C00182

Outcome 1: Biodiversity and habitats

Our special natural areas
and wildlife habitats are
connected, protected and
enhanced.

Why is this important?

Our natural areas support different ecosystems and vegetation communities and consist of an extremely diverse range of plants and animals.

Over 42% of the region is covered in native vegetation. Notable protected areas include D'Aguilar National Park, Freshwater National Park, Sheep Station Creek Conservation Park and Beerburrum West State Forest.

Our region's biodiversity has been significantly reduced by habitat loss from land clearing and fragmentation due to rural production, expansion of urban development and infrastructure.

The health of our biodiversity is also under pressure from pest and weed incursion, and changes in the distribution of native plant and animal populations, habitat function and species behaviour. Climate change and increasing frequency of natural hazards and extreme events is placing stress on our natural ecosystems and their ability to adapt, leading to an overall loss of ecological resilience.

The region is known for its beautiful natural areas, and residents are passionate about protecting the natural environment, which is central to our lifestyle, providing the green spaces in which to play, relax and enjoy, as well as ecosystem services central to our wellbeing such as clean air and water. Protecting and enhancing natural areas will help safeguard the region's unique environmental values and natural capital for future generations.

Council is already undertaking a number of programs and initiatives to protect, restore and rehabilitate natural areas and improve conservation outcomes. The Strategy will continue to support, promote and expand this work on both public and private land, including through partnerships with stakeholders. By enhancing environmental values, Council will continue supporting the natural ability of ecosystems to restore and retain their value and have the best chance to adapt following impacts by natural hazards, or other stressors.

United Nations Sustainable Development

Goal alignment

This outcome aligns strongly with the following three goals as our natural environment and biodiversity are integral to our economy, lifestyles, and the opportunities we seek:

Goal 8 seeks sustained, inclusive and sustainable economic growth, full and productive employment with decent work for all. The need to promote sustainable tourism, which will remain central to the region's image, is specifically recognised under Goal 8. Goal 14 seeks to conserve and restore coastal and marine areas, promote sustainable use of marine resources and reduce marine pollution. Similarly, Goal 15 seeks to protect, restore and promote sustainable use of terrestrial ecosystems. In line with these goals, caring for our terrestrial and marine natural areas will help to promote local businesses and support sustainable jobs into the future.

What we are already doing

- Council's Land Buyback for Environmental Purposes program has secured 99 hectares of koala and wildlife habitat since 2020.
- Council has planted more than 110,000 trees across 91 sites since 2014 as part of its voluntary offsets program.
- Signage and wildlife stencils on roads in habitat areas and ecological corridors promote native animal awareness.
- Rope bridges, underpasses, refuge poles and animal exclusion fencing at key crossing points minimise vehicle collisions with native animals.
- Council programs that manage invasive weeds and pest animal species.
- Land for Wildlife is a voluntary conservation program that partners with 600 landholders.

Our strategic priorities

- Connect, protect, enhance and expand our region's network of natural areas, wildlife habitats and movement corridors, and mitigate the threats which challenge their viability.
- Facilitate effective partnerships with private landholders, other levels of government, Traditional Custodians and community organisations to support the protection, enhancement and connection of special natural areas, wildlife and their habitats.
- Establish a monitoring and reporting program for the health of the region's special natural areas and wildlife to inform coordinated management.

Our target

Maintain the extent of native vegetation* cover (currently 42%) in the region whilst accommodating population growth (no net loss**) and review the target by 2028 with a view to increasing cover over time.

** includes vegetation mapped as koala habitat area on the Koala Conservation Plan Map and vegetation included on the State Government High Value Regrowth and Remnant Vegetation Maps.*

*** means no overall reduction in native vegetation cover.*

Our policy directions

- Vegetation community diversity and wildlife habitat extent and condition (ie composition, structure and function) is maintained with a view to increasing both over time and remnant and high value regrowth vegetation is protected.
- Identify current and emerging threats to biodiversity from pest plants and animals and incorporate responses into planning and operational decision making.
- Plan wildlife corridors for connectivity to allow wildlife movement, improve genetic diversity among species, consider climate change impacts, the need to buffer for impacts at its edges (eg weeds, changes in vegetation cover) and avoid adverse impacts from infrastructure such as road corridors, and urban development.
- Select priority areas for restoration, enhancement and wildlife corridors based on existing or potential environmental values, the area's function and the ecosystems it supports in the landscape.
- Work in partnership with the Queensland Government to expand the conservation estate, increase protection, biodiversity and connectivity of natural areas, and support environmental values.
- Identify, expand and connect isolated natural areas for protection on Council land where possible to improve ecological viability, increase wildlife habitat, respond to a warming climate, and provide managed access for enjoyment and education (where appropriate).

- Plan and undertake enhancement and restoration of natural areas in Council's estate using best practice approaches to address ongoing maintenance and hazard reduction requirements, access, weed and pest management, pollution, litter control, and facilitate connections to other natural areas.
- Land acquisitions and private land conservation are focused on achieving ecologically viable natural areas and habitats through linkages with other natural areas across the landscape and undertaking restoration in priority areas.
- Facilitate programs and projects that increase urban biodiversity, wildlife habitats and connectivity, increase urban tree cover and greening of the urban landscape.
- New development in existing and emerging urban areas avoids impacts on regional-scale corridors, riparian (waterway) and wetland areas, larger natural areas, and values and significant wildlife habitats to preserve linkages across the landscape and retain connected habitats for native wildlife.
- New development outside of existing and emerging urban areas avoids impacts on and further enhances natural areas and wildlife habitats, riparian (waterway) and wetland areas providing linkages to regional and local-scale corridors or other natural areas.
- Locate fauna movement infrastructure in areas that maximise safe movement of wildlife across the landscape, reducing barriers between and within local and regional-scale corridors, and linking natural areas.
- Council will lead and work collaboratively with stakeholders, advocate for ongoing protection of natural areas, build and strengthen stewardship, and effectively implement legislative, planning and regulatory provisions to preserve environmental values.
- Local and regional priority areas for restoration and enhancement are identified and private landholders and other stakeholders partner with Council on restoration activities supported by information, education material and advice.

Our measures of success

Measure	Desired target or trend
Improved green infrastructure network, safely connecting natural areas and wildlife habitats*	Increase
Increased protected natural areas and land managed for wildlife habitats*	Increase
Native vegetation cover	42%

*Corporate Plan measure of success

Outcome 2: Coasts and waterways

Our coasts and waterway catchments are used sustainably, and environmental values are protected and enhanced.

Why is this important?

The region features numerous freshwater and marine habitats that provide many functions, such as fish breeding grounds, migratory and threatened species habitat, water quality improvement, beach and bank stabilisation, clean air and scenic amenity that contribute to the wellbeing of our communities.

Moreton Bay's coastline consists of beaches, canals and estuary areas and the region has three major river systems and many smaller creeks and catchments. While the Stanley River flows inland to a significant water storage dam, the Pine River, and the Caboolture River and a number of smaller creeks flow into Moreton Bay. Large areas of Moreton Bay are protected and recognised as wetlands of international significance and as Queensland State Marine National Parks. There are over 2,600 km of streams and waterways mapped by Council within the region. Managing the health of our rivers, streams and the water that flows into them is important for the overall health of Moreton Bay.

Numerous wetlands are located within the Moreton Bay region including both freshwater and marine habitats. Over 9,000 hectares of the Moreton Bay region's coastal areas including the Pumicestone Passage are recognised as a Ramsar wetland of international significance for migratory shorebirds. Bribie Island wetland areas, dominated by Melaleuca tree species (Paperbark) and Eucalyptus tree species tree as well as heath vegetation, have also been recognised as nationally important wetlands²³.

Moreton Bay provides important feeding areas for several nationally threatened wildlife species, such as the green turtle, hawksbill turtle and loggerhead turtle, as well as the internationally vulnerable dugong. The area is also home to many migratory birds that are protected by international conservation agreements.

The natural beauty of the Bay attracts many recreational visitors. Our coastline and waterways are a major tourism drawcard, which contributes to the region's economy. These areas provide for recreational activities such as bush walking, bird watching, four-wheel driving, camping and kayaking. In 2018/19 tourism brought 4.7 million visitors who spent \$1.1 billion in the Region, supporting 5,313 jobs. As our population grows and visitor numbers increase, it will be important that residents and visitors interact with the Bay in a sustainable way, ensuring its health for future generations.

A changing climate will result in altered rainfall patterns (in terms of duration and quantity), extreme weather events, sea level rise and rising temperatures, which will affect the health and function of our waterways and wetlands. These impacts will be compounded by existing pressures on water supply from infrastructure, agricultural and urban uses.

Waterway vegetation, streams and wetlands provide important processes to help communities adapt to a changing climate and respond to its impacts. These include cooling the environment, retaining soil moisture during drought periods and reducing the severity of flood flow impacts on community infrastructure and businesses as well as slowing and modifying the impact of sea level rise and encroachment on inland landscapes. There is also increasing recognition of the role that wetlands and waterways play in supporting biodiversity including fish habitat, storing carbon and providing a refuge for wildlife during drought.

²³ Australian Wetlands Database - Directory Wetland Information Sheet (environment.gov.au)

United Nations Sustainable Development Goal alignment

This outcome aligns strongly with the following four goals which focus on the different actions required to preserve clean waterways and healthy coastal environments.

Goal 6 seeks sustainable water management, while Goal 14 seeks conservation and sustainable use of marine environments and resources. As in Outcome Area 1, Goals 8 and 15 are again relevant, though here there is greater emphasis on preventing pollution, water quality and our coastal environments. Conservation of our region's terrestrial ecosystems, which contribute to Goal 15, also helps protect the freshwater resources and coastal environments that are relevant to Goals 6 and 14.

What we are already doing

- Trash racks and gross pollutant traps reduce litter entering our waterways.
- We maintain stormwater infrastructure, such as pipes, channels and culverts, so the drainage system performs as intended.
- Coastal assets, such as jetties, pontoons and boat ramps ensure safe access to coastal water.
- Beach nourishment at Woorim reduces erosion risks and protects dunes for turtle nesting.
- Seawall repairs at Bongaree Beach and Toorbul use structures and coastal vegetation to protect the shoreline.
- Water quality monitoring and aeration at Beachmere Lake reduces the risk of fish kills.
- Community Bushcare programs on coastal dune and upstream riparian areas.
- Local clean up activities (eg Clean Up Australian Day).
- Council's Education and Engagement Program targeting coastal areas.
- Comprehensive network planning for stormwater quality infrastructure, including actions aimed at sustainable nutrient (from runoff) targets for waterways.
- Total Water Cycle Management Plan project review and update (2020-2022) enables strategies and actions to achieve the vision for water cycle outcomes and aligns land use planning and sustainable water management considerations.

Our strategic priorities

- Protect, maintain and manage creeks, waterways and wetlands as natural systems so they are healthy, thriving and resilient to the impacts of climate change.
- Improve land management practices in the region's catchments to restore the quality and quantity of water in our waterways to meet the needs of the environment and community.
- Integrate consideration of ecological values and ecosystem services (eg the functions that benefit the community like flood defence and bank stabilisation) of waterway corridors, wetlands and riparian areas into management decisions that affect waterway protection, restoration and enhancement.
- Facilitate effective partnerships between public and private landholders, other levels of government, Traditional Custodians, community organisations and Council to facilitate integrated catchment and coastal management including restoration, protection and enhancement of environmental values.

Our policy directions

- Support the ongoing survival of key terrestrial and marine species that use Moreton Bay and its coastal areas (particularly those already under threat) by considering how management decisions impact their distribution, habitat and life-cycle requirements.
- Support protection of instream and wetland habitats and aquatic biodiversity through:
 - improvements to their identification
 - water quality
 - riparian area restoration and management
 - minimising modifications to banks and channels
 - removing artificial impediments to fish movement.
- Ensure that creeks and waterway corridors are protected and maintained as natural systems, as important links to and between regional and local-scale corridors and natural areas.
- Recognise that creeks and waterway corridors are places of significant cultural value for Traditional Custodians and those values are to be protected and respected.
- Consider the extent of ecosystem changes anticipated due to a warming climate in decision-making and planning for coastal communities.
- Coastal ecosystems are managed to preserve their protective and ecological benefit to the region's coastline.
- Water sensitive cities principles are incorporated into total water cycle management planning which effectively integrates land use planning and sustainable water management considerations.
- Prioritise improvements to water quality in creeks and waterways through initiatives and partnerships which minimise pollution caused by runoff from urban and rural environments.
- Support litter prevention awareness and clean-up programs to avoid pollution of waterway, coastal and marine environments and impacts on marine life.

Our measures of success

Measure	Desired trend
Improved quality of our local waterways*	Increase
Increased protected natural areas and land managed for wildlife habitats*	Increase

**Corporate Plan measure of success*

Outcome 3: Sustainable living

Our neighbourhoods,
buildings and
infrastructure support
sustainable living.

Why is this important?

Rapid population growth, changes to our demographics and household compositions, patterns and modes of working and transport and climate change impacts require thoughtful and intelligent planning and design of our homes, neighbourhoods, and infrastructure.

These changes will place our natural environment under significant pressure. How we live in the environment may need to change as we transition to a more sustainable way of life. Our diverse communities range from urban hubs and seaside towns to hinterland villages. This means there is no one solution to what our communities need to support more sustainable living.

How we plan and design our built environments can significantly influence people's daily choices. Key elements of sustainable communities in a changing climate²⁴ include heat island mitigation, reduced energy demand, and access to services and active transport options.

Well designed and planned neighbourhoods, buildings and infrastructure can help reduce the number of private vehicle trips, promote active lifestyles, reduce urban heat, and facilitate lower energy and water consumption. These factors can also influence health and wellbeing, affordability and quality of life - all aspects that contribute towards sustainable living.

However, there are many challenges to overcome. Over the past 10 years median lot sizes have reduced while house sizes have increased. This affects how people and communities use their neighbourhoods, often resulting in greater demand on energy and road transport networks, less backyards and trees, and increased urban heat hazard potential.

As the population grows, the need to grow and live sustainably becomes increasingly important. The Strategy supports the Growth Management Strategy in navigating the challenges associated with accommodating population growth while maintaining environmental values. A key part of that will be through the implementation of an urban growth boundary and the effective realisation of infill development opportunities on land within it, in a way that is sensitive to its environmental context and responsive to the climate, resilience and sustainability challenges of the region.

By taking a sustainable approach to our future growth, we can strike a balance that will accommodate growth and economic prosperity, while protecting our beautiful natural environment and enviable lifestyle.

²⁴ www.aph.gov.au/Parliamentary_Business/Committees/Senate/Environment_and_Communications/CCInfrastructure/Report/c04

United Nations Sustainable Development

Goal alignment

This outcome aligns strongly with the following three goals which focus on well-being, sustainable energy and urbanisation.

Goal 3 seeks to ensure healthy lives and promote well-being for people at all ages, and Goal 7 seeks universal access to affordable, reliable and sustainable energy. Actions that reduce the health risks of urban heat or promote access to renewable energy, will contribute to these goals.

Outcome area 3 also aligns with Goal 11, which seeks to make cities and human settlements inclusive, safe, resilient and sustainable. This Goal focuses on the processes of urbanization, on participatory planning, and on opportunities to design cities sustainably as they grow. Specific targets under this Goal seek universal access to the benefits of urbanisation, particularly for those in vulnerable situations, women, children, persons with disabilities and older persons. This includes access to:

- safe, affordable and sustainable transport
- safe green and public spaces.

What we are already doing

- Your Next Generation Neighbourhood Guideline provides practical sustainable design choices to make homes more economical and sustainable.
- Your Climate Smart Living Guideline provides practical tips for building, renovating or buying a house in our region.
- Naturehoods: Your backyard and Outdoor Spaces Guideline provides practical tips on designing your backyard or small outdoor space.
- Since 2017, Walk to school shade projects resulted in 35km of tree plantings in Caboolture, Deception Bay, Kallangur, Kippa-Ring, Margate, and Murrumba Downs.
- New policy to guide the future of the Narangba Innovation Precinct, home to many large-scale industrial enterprises.
- Advocacy through the Local Government Association of Queensland (LGAQ) to promote energy efficient design in building standards.
- Investigation into the performance of Next Generation Neighbourhood Precincts.

Our strategic priorities

- Establish equitable access to walkable, complete communities for new neighbourhoods which are livable and leafy, support urban biodiversity, promoting local economic opportunities and social connectedness.
- Plan and design neighbourhoods, buildings and infrastructure to respond sensitively to their natural environment context, achieving sustainable development outcomes and supporting future growth.
- Neighbourhoods and buildings are efficiently serviced and provide for effective waste minimisation and management, water and energy efficiency, and reduced reliance on non-renewable energy and fuel sources for electricity and transport.
- Design buildings and infrastructure that are responsive to our changing climate and increasing natural hazard risks with the planning, design and building of cities, towns, neighbourhoods, streets and places reflecting best practice approaches in disaster risk reduction, resilience and adaptation.

Our policy directions

- Council supports well-planned communities and places that are socially connected, resilient, climate-responsive and designed for safety to support biodiversity and efficient use of land and resources.
- Council supports the integration and connection of new and existing neighbourhoods with recreation and natural areas using shaded pathways that enable year-round walking and cycling.
- We support active transport (walking and cycling), reduced car dependence and lower carbon transport options and incorporate them in existing neighbourhoods and the planning and design of new neighbourhoods.
- Planning and design of neighbourhoods, streets and public places considers urban heat island effects, and how they can be addressed to create cooler communities and reduce the impact of extreme heat events.
- Identification of new future growth areas avoids larger natural areas and habitats to preserve and restore links across the landscape and protect the region's biological diversity.
- Council supports and encourages uptake of sustainable design elements across new and retrofitted infrastructure including renewable energy installations, green roofs and walls, water and energy efficiency measures and low embodied carbon materials.
- Circular economy and local economic opportunities (eg supporting incubator projects, microbusinesses and industry co-location) are considered when planning for new neighbourhoods and centres.
- Land for sustainable farming and agribusiness will be retained to contribute to regional resilience and economic growth.
- Council supports community gardens and urban farming for local food production and community resilience.
- The settlement pattern for the region is informed by and responds to the scale and implications of natural hazards and climate change risks and the built environment and supporting infrastructure are planned, designed and built to increase resilience and support all people to thrive and adapt to a warming climate.
- Council leverages partnerships with key stakeholders , (including federal and state government and industry) to advocate for, and facilitate, sustainability-led urban form outcomes and projects.

Our measures of success

Measure	Desired trend
Extent of green infrastructure network, safely connecting natural areas and wildlife habitats*	Increase
Increased protected natural areas and land managed for wildlife habitats*	Increase
Improved quality of our local waterways*	Increase
Reduced bushfire risk on our managed land*	Decrease

**Corporate Plan measure of success*

Outcome 4: Climate action

We understand and proactively respond to climate change and natural hazard risks.

Why is this important?

Climate change impacts are already being experienced at regional and local scales. The expected effects of climate change include: rising sea-levels and coastal inundation; increased bushfires; increased intensity and frequency of heatwaves; and increased intensity of storms and extreme rainfall events leading to flooding.²⁵ The consequences of these climate change impacts are already being felt in natural areas and by many communities across our region.

The latest research is telling us that global warming of 1.5°C and 2°C will be exceeded this century unless deep reductions in global greenhouse gas emissions occur in the coming decades²⁶.

Every increment of global warming will intensify the severity and frequency of extreme weather events and increase natural hazard risks. Sea level rise will increase coastal erosion, permanent inundation and storm tide surges.

Even if the goal to limit global average temperature rise to below 2°C above pre-industrial levels is reached, a legacy of historical greenhouse gas emissions means an expected intensification of consequences in future. A decline in average annual rainfall with increasing heat stress will produce 'heat island' effects. Localised heat build-up and release is a key hazard for urban areas. This is because urban heat island impacts on human and environmental health will increase with climate change driven temperature increases, amplified by increasing smog and pollution levels in urban centres.

Council research indicates that average urban heat temperatures in the region's suburbs have ranged from 38°C to 45.4°C in summer. This is 7.5°C to 14.9°C higher than the average temperature in D'Aguilar National Park²⁷.

These challenges can be addressed through urban form design (shape, size, density and configuration of settlements) and micro-climate mitigation actions such as increased and strategically placed tree cover as well as climate responsive design elements (eg green infrastructure, shaded streetscapes, light coloured roofs, spacing between buildings, green facades and optimal site coverage).

Heat island and water scarcity pressures are most keenly experienced by vulnerable communities who cannot afford home insulation and air-conditioning but are affected by increasing energy and pollution emissions. These disproportional societal effects may lead to social inequality, disruption and increased demand for health and social services.

This strategy recognises the need for a risk-based approach to natural hazard planning and adaptation for climate change impacts. It will facilitate direct action to mitigate and adapt to climate change and respond to future natural hazards by increasing resilience and reducing disaster risks.

²⁷ *BMT 2022 Moreton Bay Regional Council Urban Heat Adaptation Plan Project - Draft Scoping Study*

United Nations Sustainable Development

Goal alignment

This outcome aligns strongly with the following five goals across well-being, cities and infrastructure, climate action and partnerships.

Goal 3 is concerned with health and well-being for people at all ages. Goal 9 seeks resilient infrastructure and sustainable industrialisation. Goal 13 sets out the need for urgent action to combat climate change.

Respectively, these goals highlight various roles in the global challenge of combating climate change and its impacts. Innovative industry is needed to help drive a shift to clean and environmentally sound technologies, and there is increasing need for adaptation to climate-related impacts.

Additionally, managing the growth of our urban areas in ways that build resilience, reduce, avoids or mitigates risks arising from natural hazards and limit greenhouse gas emissions will support Goal 11. Strengthening our capacities for sustainability, for example through enhanced partnerships and supportive policy, will contribute to Goal 17.

What we are already doing

- A 30-kW rooftop system at Caboolture Memorial Hall and 145 kW of solar panels on The Corso.
- Lighting, heating and cooling upgrades, and additional electricity metering at 23 facilities to save energy in Council operated buildings.
- Options analysis to determine suitable sites for a large-scale solar farm.
- Two solar powered lawn mowers.
- Ningi transfer station is 100% powered with solar energy and could provide a model for other material management facilities.
- Landfill gas feeds power plants at the Bunya, Caboolture and Dakabin waste facilities. The methane captured from landfill generates enough electricity to power 7,000 homes.
- Council's Coastal Hazard Adaptation Strategy (due for completion in mid-2023) responds to community concerns and increasing threats to our infrastructure, services and environment.
- Your Flood Smart Building Guide provides tips for rebuilding or retrofitting in a flood-prone area.
- Updating Council's flood modelling.

Our strategic priorities

- Reduce greenhouse gas emissions from Council's operations to demonstrate leadership in emissions reductions and in recognition of Australia's international commitments to reduce emissions and keep global average temperatures to below 2 degrees and as close to 1.5 degrees Celsius as possible.
- Demonstrate leadership in sustainably managing Council operations and build internal capacity to respond proactively and promptly to a warming climate and effectively identify, assess and plan for increased resilience to natural hazards and climate risks in the region.
- Council's operations, planning and decision-making are informed by and respond to a robust understanding of current and future natural hazard and climate change risks.
- Increase community awareness and understanding of natural hazards and climate change impact strengthening community resilience and capacity to respond and adapt to the effects and the impacts of a warming climate and increasing risks of natural hazards.
- Community actions to reduce personal, household and business greenhouse gas emissions are supported by Council programs, initiatives and information which build awareness and inform action.

Our target

- Net zero greenhouse gas emissions by 2039 for Council's operations.

Our policy directions

- Council actively plans for a warming climate using best practice approaches in risk-based planning, climate resilient design, adaptation, avoidance and mitigation strategies to reduce disaster risk and increase community resilience.

Climate Change Mitigation

- Prioritise practical measures to reduce greenhouse gas emissions as the primary and immediate means of a mitigation response to a warming climate.
- Reduce greenhouse gas emissions from new buildings and infrastructure using a selection of materials, sustainable design and renewable energy.
- Council supports use of renewable energy and energy efficient devices and appliances across its operations.
- Engage stakeholders to support projects and initiatives that create sinks that store greenhouse gases in vegetation and soils, including urban forests and tree planting, regenerative farming, land and biodiversity restoration projects.
- Council greenhouse gas emissions are published annually with base data inputs revised as accepted methodologies change and organisational capacity and data systems allow.
- Stakeholders and partners assist with monitoring and reporting on community greenhouse gas emissions and reductions to encourage community action.

Climate Change Adaptation

- Council decision-making processes and operations are informed by a climate change adaptation risk assessment which analyses the nature of the risks, including transitional risks over time, and their financial, operational and management implications.
- 

Natural Hazards

- Support nature-based solutions when responding to natural hazard risks, including vegetation protection, revegetation, re-naturalising grey infrastructure such as stormwater drains, ecosystem restoration, reducing hard surface areas, providing space for floodplains, forests and urban greening.
- Prioritise long-term natural hazard and climate resilience of communities and reduction of disaster risk in strategic land use and infrastructure planning from an individual site to planning for future growth areas.
- Community infrastructure that is essential to keep accessible and functioning during natural hazard events and those land uses that are hard to evacuate or accommodate vulnerable people are located away from areas at risk from natural hazards like flooding and bushfire.
- Prioritise and deliver climate change and natural hazard preparedness and risk adaptation education to empower local businesses, industry and the community to make informed decisions.

Our measures of success

Measure	Target or desired trend
Reduced greenhouse gas emissions from our operations*	Net zero greenhouse gas emissions by 2039
Reduced bushfire risk on our managed land*	Reduce

**Corporate Plan measure of success*

Outcome 5: Use of resources

We enable our materials and resources to be used cleverly and recycled to avoid waste and pollution.

Why is this important?

Many of resources we use in our daily lives are finite. It makes sense to reduce waste using resources efficiently and wisely to keep products and materials in use for as long as possible.

Resource efficiencies benefit communities, businesses and the natural environment through cost savings, reduced greenhouse gas emissions, and reduced waste in landfill.

We must use resources wisely to balance the needs of current and future generations. Resource efficiency and the circular economy is about changing consumption and services practices, so products become more durable, reusable, repairable, and recyclable²⁸. Circular economy practices provide the tools to reduce waste and increase product repurposing and reuse, resulting in employment creation and economic growth²⁹.

This strategy will build on existing initiatives and encourage sustainable consumption and production through innovative and efficient solutions to recycle, repurpose and reuse materials. It will also support communities and businesses to use resources wisely to drive innovation, job creation and economic growth in a circular economy.

United Nations Sustainable Development Goal alignment

This outcome aligns strongly with the following four goals which relate to economic growth, industry and infrastructure, urbanisation and consumption and production.

Goal 8 seeks sustained and inclusive economic growth, with decent work for all. Goal 9 seeks to build resilient infrastructure, promote sustainable industrialization and foster innovation. Goal 11 seeks sustainability in cities and Goal 12 seeks sustainable patterns of production and consumption. One of the targets under Goal 8 seeks to decouple economic growth from environmental degradation, while a target under Goal 12 highlights the need for environmentally sound management of wastes in order to minimize adverse impacts on health and the environment. This Outcome requires continuing innovation to repurpose current waste streams and design new products to aim for zero-waste.

²⁸ <https://www.chathamhouse.org/2021/06/what-circular-economy>

²⁹ <https://www.moretonbay.qld.gov.au/Services/Business-Investment/REDS>

What we are already doing

- Council will deliver a FOGO third bin waste collection service.
- Businesses in the region with fewer than 100 employees can access the free ASPIRE digital tool to transform their waste removal processes, potentially turn their waste materials into income, and track their carbon footprint.
- Free Rethink waste, recycling and composting workshops for residents.
- Council supported Clean Up Australia Day, International Composting Awareness Week, and National Recycling Week activities.
- Twelve waste management facilities accept a wide range of materials for reuse, recycling and disposal.
- Treasure Markets at Dakabin and Caboolture waste facilities rescue useful furniture, cookware, building material, bicycle parts etc from landfill.
- The Sustainability Champions Awards recognise schools and early learning centres leading the way in reducing their waste to landfill.
- Rainwater storage has been installed at The Corso, Caboolture Hub and under sports fields in Samford and Burpengary.
- From early 2024, Unitywater's Wamuran Irrigation Scheme will provide recycled water for sustainable agribusinesses and divert significant quantities of nitrogen and phosphorus from the Caboolture River.

Our strategic priorities

- Facilitate and expand sustainable waste management approaches which reduce waste to landfill and maximise resource recovery and reuse in response to population and economic growth and changes to technology.
- Implement circular economy principles to keep products and materials in circulation, reducing pressure on the region's natural resources.
- Encourage sustainable consumption and production patterns to help reduce waste and pollution to minimise adverse impacts on the natural environment.
- Encourage sustainable use of soil and water resources and conserve good quality farming land to support the food and agribusiness industry and promote local resilience and economic growth.

Our targets

- Divert 85% of waste from landfill by 2040.
- Increase recycling rates to 70% by 2040, including reducing contamination of recycling.

Our policy directions

- Incorporate the waste hierarchy (prevent, reduce, reuse then recycle) into decision-making and policy.
- Incorporate innovative and efficient ways to recycle, repurpose and reuse materials into Council projects and activities.
- Council landfill management is based on the principle of 'waste as a resource' and incorporates innovative approaches, technologies and solutions for maximum efficiency and reduced pollution.
- Incorporate the circular economy principles into decision making and policy: eliminate waste and pollution; circulate products and materials (at their highest value); and regenerate nature.
- Support communities and businesses to make informed purchasing decisions and have access to recycling, repurposing and reuse options for products and materials to contribute to keeping them in circulation and avoiding waste.
- Develop and expand businesses, industries and supply chains that are responsive to new markets and circular economy opportunities, support them through co-location, partnerships, networking opportunities and promotion of best practice and case studies.
- Adopt appropriate innovative solutions and technologies for energy, water and other resource use efficiencies.
- Collaborate with stakeholders to expand on the Regional Economic Development Strategy and encourage and maximise sustainable production and use of local food and fibre resources that support sustainability outcomes such as low food miles eating, farm-to-plate and buy local.

Our measures of success

Measure	Desired trend
Increased waste is recycled and diverted from landfill*	85% waste diversion from landfill by 2040 70% recycling rate by 2040

**Corporate Plan measure of success*

Outcome 6: Sustainable choices

Our communities and businesses practice sustainability in the choices they make every day.

Why is this important?

Every day we make choices about what we buy, how we move around and what we throw away. Practicing sustainability can take many forms, such as supporting local businesses, using renewable energy, low emission transport, or growing our own food. It is important that our businesses and communities have the necessary information and resources to participate in behaviours, actions and practices that lead to a sustainable lifestyle.

Our Moreton pulse survey identified residents were already taking actions to live more sustainably, such as recycling, reducing energy consumption and re-using waste. This strategy will continue to support communities to make these choices, provide resources and incentives to make sustainable living more accessible to everyone.

The region also has businesses who champion sustainable and circular economy practices, including IKEA , and paddock to plate and low food-mile initiatives such as REKO which link small producers to customers to create sustainable food supply chains. There is an opportunity for the region to establish its sustainability credentials and attract more like-minded companies to create an innovative hub which focuses on positive impact.

It will be important for our residents and businesses to work together with council and key partners to support sustainability initiatives to achieve this outcome, due to the complex issues and expected pace of change. Community education and business development programs undertaken to support the outcomes of the Regional Economic Development Strategy, can work to ensure that residents and businesses fully benefit from opportunities generated from the transition to a low carbon and low waste future. Equally, Council can draw from the best current examples and promote sustainability practices most beneficial to our region.

³¹ join.rekoaustralia.com.au/reko-australia/

United Nations Sustainable Development Goal alignment

This outcome aligns strongly with the following goals which relate to education, energy, industry and infrastructure, urbanisation and partnerships.

The abovementioned goals are relevant but the scope for contributions to Goals 4 and 9 are particularly worth mentioning. Goal 4 is relevant because, as an educator and facilitator, Council can help our communities acquire the knowledge and skills that promote sustainable lifestyles. Goal 9 is relevant because everyday sustainability also requires access to sustainable waste, transport and energy infrastructure.

Goal 17 seeks to strengthen the means of implementation through partnerships, including public-private and civil society partnerships supported by effective policy.

Working toward this Outcome area may therefore involve a wide range of actions relevant to the Goals. It could require innovation and may involve new kinds of partnerships with communities, infrastructure providers, business, and other stakeholders.

What we are already doing

- Environmental education centres at Burpengary, Caboolture, Griffin and Eaton's Hill offer school programs, community activities and workshops that focus on the natural environment and sustainable living.
- Waste education programs reached thousands of students in 2020-21.
- Council partnered with Grow it Local to help residents and groups connect with others and share produce, knowledge, seeds, recipes, space, and skills.
- The Sustainable Moreton Bay Business Toolbox showcases our sustainable precincts and links businesses and sustainable start-up enterprises to resources.

Our strategic priorities

- Support our communities to make sustainable lifestyle choices through purchasing decisions, water and energy use, transport mode and travel choices.
- Support businesses to embed sustainability and circular economy principles in their daily activities, systems and processes.
- Our region's sustainability credentials attract aligned industries and businesses that contribute positively to innovation, entrepreneurship and economic growth.

Our policy directions

- Increase access to and awareness of how to implement sustainability practices into daily life for residents and businesses and promote best practice and case study examples.
 - Facilitate and support stakeholder partnerships to leverage funding for initiatives that:
 - increase and share knowledge about how to live and work sustainably
 - support incubator, demonstrator or trial projects
 - support innovative approaches and new technology
 - allow catalytic or best practice projects to be undertaken.
 - Council's industry attraction initiatives and purchasing policy encourage sustainable and climate positive businesses and industries that consider the impacts of investment decisions on the environment, their customers and supply chains to make sustainable choices.
- 

Delivering our strategy

The Strategy provides a key link between Council's Corporate Plan and vision and other operational plans and policies and informs Council activities, initiatives and programs of work.

This strategy will directly guide preparation of supporting plans and indirectly inform and influence other plans and policy (eg MBRC Planning instruments). This strategy also guides decision-making across matters related to all six outcome areas.

To successfully navigate our roadmap and achieve our Strategic Priorities we will all have to work together - government, industry, business, Traditional custodians and the community, to focus on everything from long term actions to daily activities for sustainable lifestyles.

In looking to 2042 and the healthy natural and built environments and sustainable lifestyles we want to support, it is important to focus on achieving actions, monitoring our progress and the health of our environments.

A common opportunity area identified by Council staff, where improvements are required for managing environment and sustainability matters, relates to data collection, collation, management and reporting for Council's operations. Council's work on establishing an integrated environmental management system and undertaking the preparation of supporting plans will assist with improvement of data collection and management across Council.

In the interests of transparency and upholding Council's value of sustainability, opportunities for monitoring and reporting of the region's environmental and sustainability attributes will continue to be explored and implemented in ways that are accessible to the community.

Planning our actions

This strategy is supported by an Action Plan that identifies priority actions to be delivered over the next five years. This plan may be reviewed during this time to include new actions as they are identified or amend actions to ensure we are meeting expectations.

Monitoring our success

Our progress towards the Strategy's achievements will be monitored and reported through Council's Annual Report. This will include progress against our measures of success, targets and actions. These reports will be shared with our communities to drive transparency and accountability.

Monitoring and reporting on the success of individual actions can include various metrics such as community members engaged in education programs, dollars and emissions saved on climate mitigation activities, volunteer hours spent delivering environmental programs or activities.

In this strategy we have identified the importance of programs to monitor the health of our environment and ecosystems. As we continue to develop the data collection and monitoring systems needed, the results will be incorporated into existing (eg Annual Report) and/or new reporting where most effective for management and stakeholder awareness purposes.

Reviewing our strategy

This strategy is a living document that will be adjusted as required. It includes a major review every five years to align with our Corporate Plan review process. This will ensure the Strategy is achieving the intended outcomes, responds to emerging challenges and opportunities, and meets community expectations.

Resourcing our strategy

Our annual budget and operational plan process will guide priorities and resource allocation to progress the Strategy's implementation and supporting plans.

This strategy will also guide our advocacy work to help influence collaboration, partnerships and resourcing for our communities.

Thank you for helping us shape our healthy environments for the future.

Action plan

The Action Plan below sets out actions to be achieved in the first five years following adoption of this strategy. As this is the first ESS for Council, the actions below set the foundation to enable change over time. These actions are also the foundation for further initiatives, projects and actions to come in the following years.

The first tranche of actions focus on putting plans in place which, in turn, will guide further practical actions in future. The plans will assist with leveraging funding and engaging stakeholders to improve the overall efficiency and effectiveness of the measures and actions proposed.

The actions also focus on continuing and expanding business-as-usual or 'planned' actions that are effective and supported by the community. These are important 'stepping stones' to achieving progressively bigger projects in future.

Another focus for action is providing information and support to the community and businesses - this is an expanded area for Council which will support on-ground and practical action for healthy environments, protecting biodiversity and supporting sustainable living.

Action plan

No.	Actions	Council roles	Timeframe
Outcome 1: Our special natural areas and wildlife habitats are connected, protected and enhanced			
1.1	<p>Develop a Biodiversity Plan that:</p> <ul style="list-style-type: none"> Identifies the region's values and biodiversity outcomes Outlines the approach to identify and connect regional and local wildlife corridors Identifies strategic rehabilitation and restoration priorities Considers the impacts of a changing climate on the region's ecosystems and identifies the role of refugia and migration of species and ecological communities over time Informs Planning Scheme and other planning instruments Sets out a monitoring and reporting plan and indicators Identifies how to support the community and stakeholders to achieve biodiversity outcomes Identifies key biodiversity matters that Council will advocate to other levels of government. 	Deliver	Short-term
1.2	<p>Develop an Open Space Plan that:</p> <ul style="list-style-type: none"> Defines functional differences between natural areas, wildlife corridors, recreation and active green spaces Considers the importance of Council's open space and green network to link, enhance and protect regional and local wildlife corridors and natural areas Considers the importance of urban biodiversity and tree cover, and how to maximise it when managing the open space network Minimizes the impacts of using the active open space network (including associated infrastructure) on surrounding natural areas Considers opportunities to connect people with nature that benefit them and the environment. 	Deliver	Short-term
1.3	<p>Develop a Biosecurity Plan that:</p> <ul style="list-style-type: none"> Addresses the General Biosecurity Obligation (GBO) in the <i>Biosecurity Act 2014</i> Outlines how residents can also meet their GBO Details how Council can assist residents through its programs and services. 	Deliver	Short-term
1.4	Continue a compliance program focusing on education and awareness to address sediment and erosion control from building and construction sites, illegal vegetation clearing and filling floodplain areas.	Deliver	Ongoing
1.5	Undertake a review of the region's significant environmental values and determine the next steps to improve their protection.	Deliver	Short-term

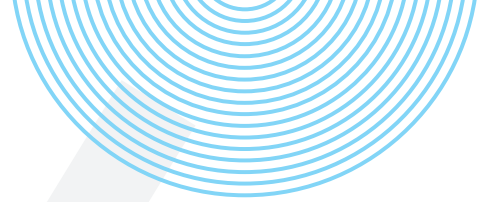

No.	Actions	Council roles	Timeframe
1.6	Plan for and support eco and nature-based tourism by: <ul style="list-style-type: none"> Facilitating equitable access to and management of natural areas, vistas and recreational environments Supporting sustainable experiences and activities that respond sensitively to their environmental context (ie avoid or minimise disturbance to existing vegetation and waterways, efficient water and energy use, limited or minimal impacts on surrounding natural areas) Supporting experiences and activities that enable restoration and protection of natural areas and wildlife habitats as co-benefits Facilitating Traditional Custodians to deliver Aboriginal and Torres Strait Islander cultural tourism experiences. 	Deliver	Ongoing / Medium-term
1.7	Expand the Environmental Offsets Program for Council projects to coordinate strategic and delivery approaches for offsets.	Deliver	Ongoing
1.8	Continue the Land Buyback for Environmental Purposes Program and investigate partnership funding, philanthropic investment and voluntary contribution opportunities to accelerate acquisitions.	Deliver	Ongoing
1.9	Continue to support pest animal management programs and terrestrial and aquatic weed treatment programs.	Deliver	Ongoing
1.10	Continue to engage with Aboriginal and Torres Strait Islander people on management of Council reserves and natural areas.	Partner	Ongoing
1.11	Undertake further local-scale native vegetation mapping to assist with priority area identification and planning.	Deliver	Medium-term
1.12	Support private landholders to protect and restore the natural environment through ecological restoration advice and incentives.	Educate	Ongoing
1.13	Develop a strategic education framework to guide stakeholder engagement across environment and sustainability matters including local biodiversity conservation and restoration.	Educate	Medium-term
1.14	Support community groups to advance opportunities to care for wildlife, through rescue and rehabilitation services.	Facilitate	Ongoing
1.15	Continue support for existing programs such as Voluntary Conservation Agreements, Land for Wildlife and Bushcare.	Partner	Ongoing
1.16	Engage with stakeholders to undertake a data availability and gaps analysis and identify opportunities to work together to monitor and report on the region's health and condition of natural areas and wildlife.	Partner	Medium-term
1.17	Continue to work with stakeholders and partners on koala habitat restoration, threat identification and reduction and disease identification, treatment and prevention projects.	Partner	Ongoing
1.18	Continue to work with the Queensland Government and key stakeholders on initiatives such as the South East Queensland Koala Conservation Strategy, and investigate partnership opportunities for increased koala habitat protection and coordinated koala conservation efforts.	Partner	Ongoing

No.	Actions	Council roles	Timeframe
Outcome 2: Our coasts and waterway catchments are used sustainably, and environmental values are protected and enhanced			
2.1	Continue and expand works to restore and regenerate riparian areas.	Deliver	Ongoing
2.2	Update mapping of the region's waterways and riparian areas to inform planning and environmental management and restoration projects.	Deliver	Medium-term
2.3	Identify appropriate locations and opportunities to retrofit and re-naturalise built infrastructure (ie to allow a waterway, drainage line or creek to mimic its original state) to improve waterway health.	Deliver	Medium-term
2.4	Review current water quality monitoring activities to determine the role, purpose and frequency of future activities.	Deliver	Medium-term
2.5	Advocate for the removal or retrofitting of significant barriers to waterway fish passages, identify opportunities to resource local projects, and deliver a barrier remediation program in Council-controlled areas with grant funding opportunities to be sourced.	Deliver	Ongoing/ Medium-term
2.6	Implement Council's Coastal Hazard Adaptation Strategy to guide the management of coastal hazards, infrastructure, services and the environment.	Deliver	Short-term/ Medium-term
2.7	Partner with stakeholders to prepare integrated catchment management plans that address catchment challenges and risks to water quality.	Deliver	Short-term/ Medium-term
2.8	Complete the Integrated Water Management Plan that coordinates stormwater infrastructure planning with wastewater and water supply planning in consultation with Unitywater.	Deliver	Short-term
2.9	Seek funding and partnership opportunities for priority total water cycle management and catchment management initiatives, including water security, quality, quantity and catchment management. to improve waterway health and condition. Collaborate with stakeholders such as Unitywater, Healthy Land and Water, Council of Mayors (SEQ), Queensland and Australian Governments.	Deliver	Short-term
2.10	Support the community to manage waterways on private property by providing educational resources and information.	Educate	Short-term
2.11	Continue and expand work to deliver education, awareness and volunteer clean-up programs and support additional events that provide sustainable options to prevent plastics and other waste from entering waterways and the ocean.	Partner	Ongoing
2.12	Investigate opportunities for wetland and vegetation restoration projects to achieve integrated outcomes such as biodiversity, water quality, carbon drawdown (sequestration) and natural hazards planning.	Partner	Medium-term

No.	Actions	Council roles	Timeframe
Outcome 3: Our neighbourhoods, buildings, and infrastructure support sustainable living			
3.1	Investigate opportunities to better incorporate sustainable design principles in Council's policies and plans to create neighbourhoods and places that support sustainable living.	Deliver	Ongoing
3.2	Establish and publicise tree cover baselines and targets for urban areas to focus actions on urban greening and cooling.	Deliver	Medium-term
3.3	Increase urban tree cover across the region to enhance the walkability of neighbourhoods and cool urban environments, focusing on new growth areas and those experiencing urban heat island impacts.	Deliver	Ongoing
3.4	Investigate opportunities to support sustainable and low carbon projects through Council's Community's grants program.	Deliver	Short-term
3.5	Review Council's project management, planning and procurement processes and identify opportunities to include sustainability criteria and design principles.	Deliver	Medium-term
3.6	Undertake a regional green business and industry analysis. Incorporate findings to ensure sustainable and circular economy business opportunities are included in design planning for new neighbourhoods and precincts.	Deliver	Ongoing
3.7	Partner with infrastructure providers, the urban development industry and/or tertiary institutions to identify strategic and research opportunities to reduce the environmental footprint of urban development.	Partner	Medium-term
3.8	Work with the development industry to identify opportunities for greater community uptake of climate resilient and sustainable development options.	Partner	Ongoing
3.9	Support built environment and infrastructure opportunities through the Climate Positive Brisbane 2032 Olympic and Paralympic Games.	Partner	Ongoing
3.10	Promote the region's industry leading projects that demonstrate excellence in sustainable and low carbon building standards.	Partner	Ongoing
3.11	Provide practical information on designing buildings and communities for sustainability, a warming climate and transition to a low carbon future.	Partner	Medium-term
3.12	Advocate to state and federal governments to improve interrelationships between building codes, legislation and planning schemes to better reflect energy efficiency and building sustainability outcomes in policies.	Advocate	Medium-term

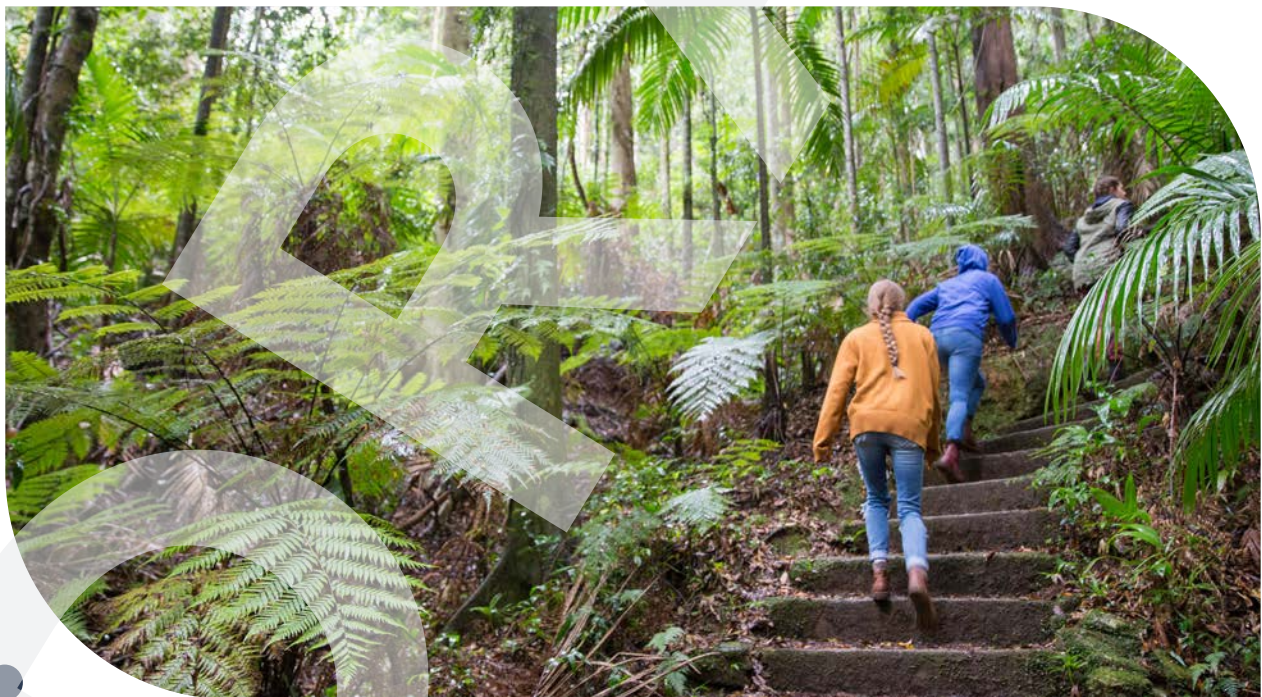

No.	Actions	Council roles	Timeframe
3.13	<p>Advocate for changes to the National Construction Code (NCC) and Queensland Development Code (QDC) for sustainability outcomes, including:</p> <ul style="list-style-type: none"> NCC to provide minimum energy performance requirements for typical construction materials NCC to incorporate minimum thermal comfort standards for current and future weather conditions QDC to remove outdated references to the NCC to enable best practice development. 	Advocate	Short-term
3.14	Investigate opportunities to link community groups with grants for retrofits and/or incubator projects that support sustainability outcomes.	Advocate	Medium-term
Outcome 4: We understand and proactively respond to climate change and natural hazard risks			
4.1	Identify and facilitate renewable energy projects in our region, including decentralised renewable energy generation projects.	Deliver	Medium-term/Long-term
4.2	Continue investigations into the feasibility of a solar farm for Council's electricity needs.	Deliver	Ongoing
4.3	Undertake annual corporate greenhouse gas inventories to monitor greenhouse gas emission reductions and progress towards the net zero target.	Deliver	Ongoing
4.4	Transition to energy efficient devices across Council operations.	Deliver	Ongoing
4.5	Review and update Council's Climate Change Policy to reflect our mitigation target and pathway for climate change action.	Deliver	Ongoing
4.6	<p>Develop a Climate Change Mitigation Plan that considers:</p> <ul style="list-style-type: none"> An emissions reduction pathway for Council operations including fleet decarbonisation, renewable energy and other mitigation activities Carbon offset approach (including Council guidelines for purchasing carbon credits) Carbon drawdown (sequestration) opportunities Community mitigation opportunities Education and engagement Advocacy priorities Partnerships, collaborations and resources Emissions reporting framework, methods and implementation. 	Deliver	Short-term
4.7	<p>Prepare a Climate Change Adaptation and Resilience Plan that considers:</p> <ul style="list-style-type: none"> Climate change risk assessments outcomes Community resilience Options for an equitable transition for communities in affected areas Awareness, education and engagement programs Climate resilient development guidelines Advocacy priorities Partnerships, collaborations and resources Research, data and monitoring and evaluation. 	Deliver	Medium-term

No.	Actions	Council roles	Timeframe
4.8	Continue actions that proactively manage and respond to natural hazard risks (including bushfires) on Council land.	Deliver	Ongoing
4.9	Continue projects that review and update mapping for bushfire hazard, landslide and flood risks.	Deliver	Ongoing
4.10	Undertake whole of region natural hazard risk assessments, including impacts of climate change, to inform strategic land use planning, policy, plans and decision-making for: bushfires, flooding, urban heat, landslide, storm-tide inundation, and coastal erosion.	Deliver	Ongoing
4.11	Develop an Urban Heat Adaptation Plan which identifies priority actions to support planning for existing and new communities to adapt to urban heat hazard.	Deliver	Medium-term
4.12	Develop a flood risk management framework and plans for all catchments to increase flood resilience in the region.	Deliver	Short-term
4.13	Review the existing Floodplain Risk Management Framework (2015) to reflect a contemporary best practice approach and update Practice Notes 1-11.	Deliver	Short-term
4.14	<p>Continue to deliver on Council's Cities Power Partnership pledges:</p> <ul style="list-style-type: none"> • Install renewable energy (solar PV and battery storage) on Council buildings • Support local community energy groups with their initiatives • Support community facilities to access renewable energy through incentives, support or grants • Encourage sustainable transport use such as public transport, walking and cycling through Council's transport planning and design <p>Set up meetings and attend events to work with other cities on tackling climate change.</p>	Deliver	Ongoing
4.15	Review and update shoreline erosion management plans to address emerging sea level rise risks and inform Council's coastal management activities.	Deliver	Medium-term
4.16	Continue to engage with stakeholders on current and future natural hazard risk preparedness and response.	Educate	Ongoing
4.17	Facilitate the take up of electric vehicles and lower emissions forms of transport across the region.	Facilitate	Ongoing
4.18	Investigate short-term education, partnerships and communication activities for emissions reduction and resilience to inform the Strategic Education Framework and future Council plans.	Partner	Short-term
4.19	Collaborate with other councils to address climate change through projects and initiatives for awareness, education, practical action and research.	Partner	Ongoing
4.20	Advocate for the Queensland Government to review the NCC and QDC to increase safety standards for natural hazards in buildings (including flood resilient design, severe wind, urban heat and bushfire hazards).	Advocate	Ongoing

No.	Actions	Council roles	Timeframe
4.21	Monitor policy, legislation and project initiatives undertaken by other levels of government to address climate change action and advocate for Moreton Bay's interests.	Advocate	Ongoing
Outcome 5: We enable our materials and resources to be used cleverly and recycled to avoid waste and pollution			
5.1	Continue landfill gas to energy projects at Council waste facilities and investigate opportunities to improve and expand their effectiveness and efficiency (eg through battery storage).	Deliver	Ongoing
5.2	Deliver upgrades to Council waste management facilities based on Master Plans to provide diversion for increased materials at each site.	Deliver	Medium-term
5.3	Continue preparations for a FOGO (Food Organics Garden Organics) third bin collection service and construction of a food and organic waste recycling facility to divert organic waste from landfill.	Deliver	Short-term
5.4	Review development requirements to support efficient and effective storage and collection of waste, taking into account the intended rollout of a FOGO bin.	Deliver	Medium-term
5.5	Review Council-managed facilities to maximise recycling opportunities.	Deliver	Medium-term
5.6	Support initiatives that share resources, infrastructure, services, recycle or repurpose materials and goods, to reduce demand for new purchases and materials.	Deliver	Ongoing
5.7	Continue to develop the Food and Agribusiness Industry Plan. Consider ways to encourage and expand sustainable fishing, regenerative farming and aquaculture practices that contribute to economic growth, increase local food resilience and environmental performance.	Deliver	Ongoing
5.8	Undertake a regional green business and industry analysis to identify opportunities for growth of resource recovery, recycling and innovative low-carbon and sustainable businesses that support a circular economy and local resilience.	Deliver	Short-term
5.9	Deliver waste education programs and initiatives.	Educate	Medium-term
5.10	Encourage local opportunities for remanufacturing (eg using recycled materials for local consumption), recycling or repurposing materials through regional networks and partnerships.	Facilitate	Medium-term
5.11	Continue to support the ASPIRE (Advisory System for Processing, Innovation and Resource Exchange) platform.	Partner	Ongoing
5.12	Collaborate with other councils and industry through projects and initiatives for awareness, education or infrastructure development.	Partner	Ongoing
5.13	Continue to advocate for funding of waste projects in federal, state and regional networks and frameworks.	Advocate	Ongoing

No.	Actions	Council roles	Timeframe
Outcome 6: Our communities and businesses practice sustainability in the choices they make every day			
6.1	Develop a Sustainability at Home Guide for residents which provides easy, low cost examples of how to be more sustainable and overcoming commonly encountered barriers.	Deliver	Medium-term
6.2	Continue to support Grow it Local - a free platform for residents and groups to learn about and grow fresh produce.	Deliver	Ongoing
6.3	Investigate opportunities to deliver sustainability information to the community through existing cultural and education programs and services (eg art galleries, library programs and education centres).	Deliver	Ongoing
6.4	Develop online practical information about sustainability and the circular economy for residents and businesses, including links to stakeholder and partner resources.	Deliver	Medium-term
6.5	In conjunction with changes to selected Council environment centres, investigate potential for sustainability lab programs to study and demonstrate architectural and building responses to climate, sustainable energy performance, urban heat and waste use.	Deliver	Medium-term
6.6	Support community uptake of energy efficient and renewable energy technology.	Deliver	Ongoing
6.7	Investigate opportunities for a pilot program with targeted resident and business groups to implement sustainability practices that reduce their environmental footprint and used to demonstrate sustainable outcomes for the entire community.	Deliver	Medium-term
6.8	Investigate opportunities to support: <ul style="list-style-type: none"> Local businesses to make capital improvements to energy and water efficiency, waste reduction, resource recovery and reducing emissions Sustainability and renewable-energy specific grants for community groups. 	Deliver	Medium-term
6.9	Support community or business initiatives and events that increase participation in sustainability practices, contribute to a sustainable economy and resilient, vibrant community.	Partner	Ongoing
Other actions (not related to a specific outcome area)			
QA.1	Develop a strategic environmental and sustainability education framework and plan for the purpose of prioritising, aligning, resourcing and maximising the delivery of existing and new education and awareness initiatives and activities across Council and identifying partnership, collaboration and funding opportunities (including with schools).	Deliver	Medium-term
QA.2	Review the Sustainability Policy to embed sustainability principles across Council's operations.	Deliver	Ongoing
QA.3	Implement an integrated environmental management system for Council's operations.	Deliver	Ongoing

No.	Actions	Council roles	Timeframe
QA.4	Incorporate environment and sustainability requirements into Council's project management framework for capital projects.	Deliver	Short-term
QA.5	Incorporate environmental and sustainability principles into Council's asset management framework including: <ul style="list-style-type: none"> • Reviewing Council's portfolio and strategic asset management plans to recognise and align asset management outcomes to environmental and sustainability principles and outcomes • Reviewing asset data creation and management practices to support agreed sustainability outcomes. 	Deliver	Ongoing
QA.6	Review and revise Council's current procurement practices and policies to incorporate sustainability and climate change considerations and criteria and assist with data gathering to monitor Council's environmental performance.	Deliver	Short-term
QA.7	Investigate an expanded rollout of smart cities solutions to facilitate data collection and management, efficiency and sustainability outcomes and the advancement of this strategy.	Deliver	Medium-term
QA.8	Investigate ongoing collaborations and partnerships with universities and other stakeholders to address priority environment and sustainability data/knowledge gaps.	Partner	Ongoing
QA.9	Advocate for funding opportunities through the SEQ City Deal to implement strategy actions, eg SEQ Liveability Fund, Resilient Rivers Initiative, and Green Urban Infrastructure Initiative.	Advocate	Ongoing

Glossary

Term	Description
ASPIRE	A digital tool that empowers businesses to exchange waste as a resource across a region.
Biodiversity	The variety of all life forms on earth, including plants, animals and micro-organisms, their genes, and the terrestrial, marine and freshwater ecosystems of which they are a part.
Business as usual	Actions delivered as day-to-day organisational operations.
Carbon footprint	The amount of carbon dioxide or other greenhouse gases (expressed as carbon dioxide equivalents) emitted into the atmosphere by the activities of an individual, company, country, etc.
Climate change	A change in the pattern of weather, and related changes in oceans, land surfaces and ice sheets, occurring over time scales of decades or longer.
Climate change adaptation	The process of adjusting to actual or expected changes in climate to reduce or avoid climate impacts or exploit beneficial opportunities.
Climate change mitigation	The action we take to limit changes in global climate caused by human activities.
Corporate Plan	Council's five-year roadmap that describes the strategic goals and outcomes that support our vision: Our Moreton Bay. Amazing places. Natural spaces.
Ecosystem	A community of living organisms (plants, animals and microbes) in a particular area.
Ecosystem services	Benefits provided to humans by ecosystems, including: <ul style="list-style-type: none"> • provisioning services, eg air, water, and food • regulating services, eg climate change mitigation and flood defence • supporting services, eg soil formation and pollination of crops by insects • cultural services, eg recreational and spiritual benefits.

Term	Description
Greenhouse gas	Gases in the atmosphere such as water vapour, carbon dioxide, methane and nitrous oxide that can absorb infrared radiation, trapping heat in the atmosphere.
Grey infrastructure	Traditional human-engineered infrastructure such as seawalls, pipes, roads and stormwater drains.
Life cycle costs	Costs of resource ownership, including expenses relating to buying, maintaining, operating, and disposing of an object, project or asset.
Long-term	Actions that occur after 5 or more years, however planning or design may occur in the medium-term.
Low embodied carbon materials	Produce a low level of carbon during the material's production, transportation, and installation.
Nature based solutions	Actions to protect, conserve, restore, sustainably use and manage natural or modified terrestrial, freshwater, coastal and marine ecosystems, which address social, economic and environmental challenges effectively and adaptively, while simultaneously providing human well-being, ecosystem services, and resilience and biodiversity benefits.
Natural capital	The stock of natural resources, including geology, soils, air, water and living organisms, that underpins our economy and society.
Natural hazard	Any potential occurrence of a natural physical event, including heatwave, flooding, bushfire, landslide, earthquake, tsunami, cyclone, severe wind, severe thunderstorm, sea level rise, storm tide inundation and coastal erosion, that may cause damage to property, infrastructure, livelihoods, human health, service provision, environmental resources etc.
Natural hazard risk assessment	An evaluation of the likelihood and consequences of a damaging natural event.
Outcomes	High-level focus areas that guide strategic priorities.
Planning Scheme	Guides the development and use of land, buildings and structures in the region.
Polluter pays principle	Those who generate pollution should bear the costs of containment, avoidance, clean-up and remediation.

Term	Description
Reconciliation	Strengthening relationships between Aboriginal and Torres Strait Islander peoples and non-Indigenous peoples to benefit all Australians.
Short-term	Actions that occur within 1-2 years.
Strategic Priority	A strategic pathway to achieve an outcome.
Sustainability	To protect the environment while allowing for development that improves the total quality of life, both now and in the future, in a way that maintains the ecological processes on which life depends.
Urban heat island	An urban or metropolitan area that is significantly warmer than surrounding rural areas due to a concentration of hard sealed surfaces, such as roads, pavement and buildings which absorb and retain heat.
Water sensitive cities principles	Cities as water supply catchments. Cities providing ecosystem services and a healthy natural environment and cities comprising water sensitive communities (CRC for Water Sensitive Cities).

Acronym	Description
CWS	Community Wellbeing Strategy
ESS	Environment and Sustainability Strategy
GMS	Growth Management Strategy
ITS	Integrated Transport Strategy
REDS	Regional Economic Development Strategy
